Privacy Concerns and Issues with Artificial Intelligence

Dr. Narendra Kumar, Assistant Professor, Department of Law, Bhagwant University, Ajmer, (Rajasthan) India Advnarendra1234@gmail.com

Abstract

As artificial intelligence (AI) systems become increasingly integrated into daily life, they raise significant privacy concerns that need to be addressed. The use of AI in various sectors, such as healthcare, finance, and social media, involves the collection, analysis, and storage of large amounts of personal data. This widespread data usage creates risks related to unauthorized access, surveillance, data misuse, and lack of transparency in algorithmic decision-making processes. Additionally, the complexity of AI systems makes it difficult for individuals to understand how their data is being used or to control its flow. Ethical considerations around informed consent, data ownership, and accountability are crucial in mitigating privacy risks. As AI technologies continue to evolve, establishing robust privacy protections and regulations becomes essential to safeguard personal information and ensure trust in AI systems. This abstract explores these privacy concerns, highlighting the challenges and proposing potential solutions to address the growing tension between AI innovation and individual privacy rights.
