

AI AND MEDICAL FIELD

Dr. Yasmin Khanam, Professor Zoology, Govt. N M College (Hanumangarh), yasminkhanam7@gmail.com

Abstract

Artificial Intelligence based systems like computer and robots extensively used in medical field, today. These includes diagnosis of many critical disease like cancer, AIDS etc, operating patients by highly advanced computer systems and robots to do surgery beside this it do interaction between doctor and patients to save time. AI system works accurately and finds results quickly like patients medical reports like blood examinations, x-ray, ultrasound, ECG, MRI etc. In this way AI is providing major changes in medical science and giving major facilities to patients recovery from their diseases. Beside this many drugs can be examined by this technology. This the AI playing a major role in medical field in these days.
