

Social consequences and challenges of AI

Dr. Anu Arora, Asst. Professor, Suratgarh P.G. College, Suratgarh

Abstract

AI as we know, is Artificial Intelligence. Artificial not natural yet intelligence. As the world progresses, so do the technologies and its pros and cons. AI for sure is a result of human intelligence. Just like a human brain it can be used on both right and wrong paths. If used by a sane brained human, it can prove to be an amazing helper to make everything far more easier. On the contrary, if it is used by a cunning person it can spoil everything around.

To make good use of AI We need to know the pros and cons of AI. Know the loopholes of AI get expertise in it. Know the facts, which can corrupt the uses of AI. Socially, AI has a lot of challenges specially in a country like India

- No privacy
- Decreasing job opportunities
- Trust issues
- over the board transparency
- ethical issues

The result might be flabbergasting. AI has already entered in our lives. It will be really difficult to keep yourself away from it. So, better learn the ways of handling it as a servant, before it takes over our lives like a master.
