The Impact of Artificial Intelligence (AI) in the Education System of Rajasthan: Current Status and Future Prospects

Jitendra Singh, Research Scholar, SKD University, Hanumangarh
Dr. Lalit Kumar, SKD University, Hanumangarh

Abstract

The integration of Artificial Intelligence (AI) in Rajasthan's education system is revolutionizing the way teaching and learning processes are conducted. This study explores the current applications of AI in personalized learning, smart classrooms, automated assessment systems, and administrative efficiency. It also examines the key challenges such as infrastructure limitations, teacher training gaps, and financial constraints. The findings suggest that AI has the potential to bridge the educational divide and improve learning outcomes, provided that a robust implementation strategy is adopted.
