Harnessing AI for Social Change: Exploring Opportunities, Challenges, and Ethical Imperatives

Mandeep Kaur, Assistant Professor, Government Nehru Memorial College, Hanumangarh

Abstract

Artificial Intelligence (AI) is transforming various aspects of society, from healthcare and education to employment and governance. As AI continues to advance, it's essential to examine its impact on social change. The present study seeks to explore the positive impact of AI on social change in terms of increased accessibility, enhanced decision making and improved resource allocation. The paper will also make an attempt to charter how we can work towards creating a more equitable and just society. Since AI has the potential to drive significant social change which has its limits and drawbacks attached, the study will also put forward the ethical urgency to prioritize transparency, accountability, and fairness in AI system design.
