Abstract

The ICT-based services of the library have also been highlighted. ICT has revolutionized the field of library and information services.

ICT has become so advanced that it has made accessing information on any subject very easy. An analytical study of Information Communication Technology (ICT) in academic libraries shows that with the help of ICT, many tasks in academic libraries, such as accessing, cataloguing, periodical control, stock verification, and information retrieval, can be performed more efficiently using specialized library software. The library can provide communication services to users through audio, audiovisuals, tele textbooks, fax, online search, email networking, social media platforms, search engines, teleconferencing, cellular phones, and voice correspondence. The role of ICT in the development of academic libraries is very significant.

Keywords: Internet service, ICT, ICT tools, Library software.
