

Impact of Digital Learning on Students' Academic Performance

Dr. Harish Kansal, Lecturer, Department of Education, Maharana Pratap Collage of Education for Women, Bhiwani, Haryana

Abstract

Digital learning has become an important part of modern education, providing students with access to online resources, educational applications, virtual classrooms, and multimedia learning materials. This paper examines the impact of digital learning on students' academic performance. It focuses on how digital tools can improve students' engagement, access to information, learning flexibility, and understanding of academic concepts. The study also considers challenges such as lack of digital infrastructure, limited digital literacy, internet accessibility, and distractions during online learning. The paper highlights the potential of effective digital learning practices to improve educational outcomes and create more flexible and student-centered learning environments.

Keywords: Digital Learning, Academic Performance, Educational Technology, Online Education, Student Engagement, E-Learning.
