

Relationship Between Student Motivation and Academic Achievement

Dr. Harish Kansal, Lecturer, Department of Education, Maharana Pratap Collage of Education for Women, Bhiwani, Haryana

Abstract

Student motivation is an important factor influencing learning behaviour and academic achievement. This paper examines the relationship between students' motivation and their academic performance. Motivation influences students' participation, persistence, learning strategies, and willingness to overcome academic challenges. The study considers both intrinsic and extrinsic motivation and explores their potential influence on students' academic outcomes. It also highlights the role of teachers, parents, classroom environment, and educational practices in developing and maintaining student motivation. Understanding the relationship between motivation and achievement can help educators design effective teaching strategies and create supportive learning environments that encourage students to achieve their academic goals.

Keywords: Student Motivation, Academic Achievement, Learning, Intrinsic Motivation, Extrinsic Motivation, Student Engagement, Educational Psychology.
